Dear students

This study guide offers an overview of the Master's programme in Food Science and Engineering. It contains all pertinent information concerning your studies in brief, as well as references to more detailed information.

Please keep in mind that all information in this guide is subject to change. For the latest updates please visit the website of the University of Hohenheim at **www.uni-hohenheim.de**.

Answers to specific questions concerning rules and regulations of the programme can be found in the examination regulations at **www.uni-hohenheim.de/examination-regulations**.

We hope you enjoy your stay at the University of Hohenheim and wish you all the best for your studies!

Final degree

Master of Science (M. Sc.)

Prescribed period of study

4 semesters – full-time, on-site – 120 ECTS credits

Language of instruction

The language of instruction is English.

Lecture period

The lecture period of the winter semester lasts from mid-October to mid-February. The lecture period of the summer semester lasts from early April until the end of July. The programme has a modular structure and all modules consist of compact courses lasting four weeks, with new modules commencing every fifth week.

The specific dates of the modules as well as the semester dates for the respective academic year can be found on the last page of this curriculum.

Contents of the degree programme

The Master's programme in Food Science and Engineering is research-oriented and attends to the interaction of complex food matrices and technical processes.

Modern food processing is concerned with the transformation of plant-based and animal-based raw materials into value-added, safe and stable food or nutrient formula. Food ought to simultaneously meet the expectations of each individual consumer regarding appearance, smell and taste, while also complying with the nutritional requirements of specific groups of consumers, such as infants, pregnant women, seniors or athletes. A thorough understanding of the biogenesis of raw materials and their mi-

crobiological ecology in combination with extensive expertise regarding equipment and processes is necessary for the development of appropriate food formula and processing techniques. In addition, through scientific advances common additives may be increasingly foregone altogether.

Whilst food is developed to cater to specific dietary requirements, e.g. intolerance to gluten, it may also provide additional benefits to the consumer by containing pre-defined amounts of bio-functional substances, such as micronutrients. These products are manufactured in automated production processes using in-line sensor technology.

The processing of raw materials of agricultural production is caught between the limits of regional product diversity and the far-reaching demands of globalisation, between individual sensory pleasures and worldwide food security, between sustainability and the ability to compete in the marketplace, as well as between social demands and economic interests. Debating and discussing these topics supplements the natural scientific and engineering foundation of this programme.

Aims of the degree programme

Modern foodstuffs are designed to have a particular flavour, conform to a specific manner of consumption or approach to life, help balance nutritional deficits or appeal to a specific group of consumers, and are increasingly produced from organic raw materials.

Imparting natural scientific and engineering knowledge, as well as analytical methods is a key aspect of this programme. You are prepared to deal with issues regarding food processing in a goal-oriented manner. These skills are intensely practiced and developed through practical courses, seminars and project work modules, which give you the opportunity to work independently on a research project. This way you learn how to independently organise, execute, present and publish basic as well as application-oriented research. The programme is completed by submitting a Master's thesis, which is integrated into ongoing research projects of the Institute of Food Science and Biotechnology. During this process you

learn to independently conduct scientific research, albeit as part of a team.

Structure of the programme

During the course of the two year study programme modules in the amount of a minimum of 120 credits, including the Master's thesis, have to be completed successfully. This includes compulsory modules in the amount of a minimum of 45 credits, focusing on connecting soft matter science approaches with microbiological knowledge and engineering methods needed to understand all aspects of the processing of the complex food matrix.

Elective modules supplement the course of studies. These are integrated flexibly into the first three semesters depending on your personal interests, preferred area of specialisation and courses on offer. It is possible to also select elective modules of other degree programmes (more information can be found on page 9).

The basis of food science and engineering is an understanding of the interaction between the complex food matrix and food processing. Accordingly, in various modules treatment processes for foodstuffs are analysed and illustrated via excursions. Innovative technology with which functional compounds from plant- or animal-based raw materials may be efficiently gained, enzymatically modified or stabilised through encapsulation, are discussed. Strategies of scientific methods, including modern chemical, physical and molecular methods, statistical methods, methods for modelling and simulating reactions within individual processing steps, are taught. During practical courses acquired knowledge is put to practice in order to gain experience in doing practical work in the laboratory. In Seminars the focus lies on exploring food processing in natural scientific, engineering and economics contexts through discussion and debate.

Various project work modules introduce you to working independently on a scientific research project and prepare you for your Master's thesis. The compulsory module "Project Work (compulsory)" has to be completed by every student. As with other project work modules you are free to choose when you want to complete your project work. However, it must

be completed before starting to write the Master's thesis at the latest. The execution of the project work is done in consultation with a supervisor assigned by the department (postgraduate scientific staff member).

A research and development internship may be integrated in the course of your studies on an individual basis and credits can be awarded). Please contact your supervising professor before the internship begins in order to establish a timeframe and academic requirements (more information can be found on page 11).

With the completion of a research-intensive Master's thesis at the end of the fourth semester you demonstrate your ability to do independent scientific work.

Competency profile

The competency profile helps you identify the skills we expect you to acquire during the course of your studies. In addition to specialized knowledge in the field of food science and engineering, these skills supplement and complete your education. The recommended course of studies as displayed on the next page is an outline of how we are going to support you in acquiring these competencies.

	Professional skills	Cognitive skills	Key skills
	Upon completion of your studies you...		
Knowledge	<ul style="list-style-type: none"> possess comprehensive and in-depth knowledge of the field of food science and engineering and can clearly communicate its scientific basics, even to laymen. are able to grasp new and unknown facts and developments in the field of food science and incorporate them into and thereby expand upon already existing knowledge. 	<ul style="list-style-type: none"> are able to describe the principle of a method in detail from a natural and engineering science point of view. quickly comprehend new and unknown facts and developments in the adjoining disciplines of biotechnology, nutritional science as well as engineering by drawing on existing knowledge, which is expanded in the process. 	<ul style="list-style-type: none"> possess critical thinking skills. are able to work efficiently towards a goal, both independently and as part of a team. are able to design, coordinate, execute and analyse diverse projects. can take part and contribute to (scientific) discussions as well as moderate them. know how to deal with contrary opinions in a productive manner.
Application	<ul style="list-style-type: none"> know how to develop new products as well as their corresponding processing techniques by connecting theory to praxis. You are familiar with necessary laboratory equipment and can derive application-oriented concepts from experimental work. Are able to identify the main unit operations of processing and to evaluate new techniques and processing approaches. are able to adapt the processing of food from laboratory to pilot and ultimately to industrial scale. 	<ul style="list-style-type: none"> are able to transfer knowledge to diverse fields of operation. are able to combine knowledge of the area of food science with developments in adjoining fields, such as automatisisation and inline analytical tools, in order to develop inter- and transdisciplinary concepts and methods. 	<ul style="list-style-type: none"> are able to confidently give presentations know how to express yourself appropriately in spoken and written form.
Analysis	<ul style="list-style-type: none"> can easily implement existing methods in strategies and know how to modify existing methods when required to suit a particular problem. are able to analyse your own methods and strategies and optimise them if necessary. 		

Course of studies table

This table represents a recommendation for the ideal course of studies during the four semester Master's programme. It shows which modules should be completed in which semester. Depending on the course offerings deviations are possible, as long as they conform to the rules set forth in the study and examination regulations. Depending on your area of specialization and courses on offer you choose elective modules in the amount of a minimum of 45 credits. These are integrated flexibly into the course of the first three semesters.

Semester	7.5 credits	7.5 credits	7.5 credits	7.5 credits
1st	Analysis and Quality Assurance in the Food Production (1504-500)	Applied Mathematics for the Life Sciences (1101-400)	Food Process Design I – Efficient Processing and Transport Phenomena (1503-520)	Soft Matter Science I – Food Rheology and Structure (1505-500)
2nd	Soft Matter Science II – Food Physics (1507-510)	Elective Modules		
3rd	Project Work (Compulsory) (1500-530) - module may be completed in any module slot -			
4th	Master's Thesis Food Science and Engineering (1500-410)			

Detailed information on individual modules and their corresponding courses, as well as the current state of courses on offer may be obtained at www.uni-hohenheim.de/module-catalogue/fse.

Modules

The programme in Food Science and Engineering is built on compulsory and elective modules. Each module awards 7.5 credits and lasts four weeks (unless specifically stated otherwise). This modular structure allows you to design the course of your studies on an individual basis.

Detailed information on individual modules, their corresponding courses, the current state of courses on offer as well as on how to register for exams may be obtained at www.uni-hohenheim.de/module-catalogue/fse.

For any changes please see the latest version of the curriculum at www.uni-hohenheim.de/curricula.

Compulsory modules

Compulsory modules in the amount of a minimum of 45 credits as well as the Master's thesis have to be completed by all students in order to obtain their degree.

Compulsory modules of the 1st semester (WS 2014/15)

Slot	Module dates	Code	Module title
1	13.10. – 07.11.2014	1504-500	Analysis and Quality Assurance in the Food Production
2	10.11. – 05.12.2014	1101-400	Applied Mathematics for the Life Sciences
3	08.12. – 19.12.2014 07.01. – 16.01.2015	1503-520	Food Process Design I – Efficient Processing and Transport Phenomena
4	19.01. – 13.02.2015	1505-500	Soft Matter Science I – Food Rheology and Structure

Compulsory modules of the 2nd semester (SS 2015)

Slot	Module dates	Code	Module title
1	13.04. – 08.05.2015	1505-510	Soft Matter Science II – Food Physics

Compulsory modules of the 3rd semester (WS 2015/16)

Please note: This module may also be completed in another semester and in any module slot.

Slot	Module dates	Code	Module title
any	may be completed anytime	1500-530	Project Work (Compulsory)

Elective modules

In addition to the compulsory modules of the programme in Food Science and Engineering, you have to complete elective modules in the amount of a minimum of 45 credits. Elective modules provide you with the opportunity to specialise in an area that corresponds to your personal and professional interests. These modules may be integrated flexibly into the first three semesters, depending on their availability.

You may choose elective modules of the Food Science and Engineering programme, of other natural science Master's programmes of the University of Hohenheim or of other degree programmes offered at the University of Hohenheim or at other German or foreign universities, for which a successful petition with the board of examiners is required.

Elective modules also include internships. For more information on internships, please see page 11.

Elective modules of the 2nd semester (SS 2015)

Please note: The elective module listed in the first module slot take place at the same time as the compulsory module "Soft Matter Science II – Food Physics" (see page 8). These three modules are offered every summer semester, however, of these three modules only the compulsory module "Soft Matter Science II – Food Physics" must be completed in order to graduate.

Slot	Module dates	Code	Module title
1	13.04. – 08.05.2015	1507-510	Food Microbiology

Slot	Module dates	Code	Module title
2	11.05. – 22.05.2015 01.06. – 12.06.2015	1502-490	Industrial Case Studies - FMB
2	11.05. – 22.05.2015 01.06. – 12.06.2015	1505-440	Dairy Science and Technology
2	11.05. – 22.05.2015 01.06. – 12.06.2015	1509-500	Advanced Process Engineering Techniques for Cereal Processing
2	11.05. – 22.05.2015 01.06. – 12.06.2015	2502-430	Cellular Microbiology
3	15.06. – 10.07.2015	1503-500	Food Process Design II – Process integration and Scale-up
3	15.06. – 10.07.2015	1504-430	<i>Technologie Pflanzlicher Lebensmittel II</i> (taught in German)
3	15.06. – 10.07.2015	1502-510	Enzyme Technology
3	15.06. – 10.07.2015	1301-450	Metal Coordination Chemistry in Biomolecules
4	13.07. – 07.08.2015	1503-540	Drying, Granulation and Instantisation
4	13.07. – 07.08.2015	1506-500	Bioethanol and Distilled Spirits
4	13.07. – 07.08.2015	1101-430	Modelling and Simulation of Biochemical Reaction Networks
4	13.07. – 07.08.2015	1701-410	<i>Instrumentelle Analytik und Bioassays</i> (taught in German)
4	13.07. – 07.08.2015	1405-400	Nutrigenomics
4	13.07. – 07.08.2015	1508-400	Advanced Sensory Analysis of Foods
	TBD	1000-040	UNCert III English for Scientific Purposes

Lecture free period: 26.05.2015 - 30.05.2015 (Pentecost)

Elective modules of the 3rd semester (WS 2015/16)

Slot	Module dates	Code	Module title
1	12.10. – 06-11.2015	1503-510	Process Driven Product Design: Cereals and Sweets
1	12.10. – 06-11.2015	1505-420	<i>Innovative Milchtechnologie</i> (taught in German)
1	12.10. – 06-11.2015	1303-420	Physical Chemistry (Research Internship)
1	12.10. – 06-11.2015	1507-500	Advanced Meat Science and Technology
1	12.10. – 06-11.2015	1502-500	Scientific Writing and Reporting
1	12.10. – 06-11.2015	4704-430	Food Chain Eier und Geflügelfleisch (taught in German)
2	09.11 – 04.12.2015	1504-420	<i>Technologie Pflanzlicher Lebensmittel I</i> (taught in German)
2	09.11 – 04.12.2015	1102-510	Applied Statistics for the Life Sciences
2	09.11 – 04.12.2015	1503-530	Industrial Case Studies – FSE
2	09.11 – 04.12.2015	1303-420	Physical Chemistry (Research Internship)
2	09.11 – 04.12.2015	1501-400	Fermentation Technology
3	07.12. – 22.12.2015 07.01. – 15.01.2016	1510-400	Downstream Processing
3	07.12. – 22.12.2015 07.01. – 15.01.2016	2303-430	<i>Molekulare Sinnesphysiologie</i> (taught in German)
4	18.01. – 12.02.2016	1504-440	<i>Technologie Pflanzlicher Lebensmittel III</i> (taught in German)
4	18.01. – 12.02.2016	1403-420	<i>Grundlagen des Alterns und altersbedingte Erkrankungen</i> (taught in German)
	TBD	1000-040	UNIcert III English for Scientific Purposes

Internship

As part of the curriculum you have the opportunity to do an internship and be awarded credits. An internship may be done at a national or international research center or at a research and development department of a company in Germany or abroad that is related to the life sciences: the food, pharmaceutical as well as their supplying industries, in the sector of plant design and engineering, as well as process technology.

You have to find an internship placement on your own; however, the Internship Office (uhoh.de/praktikum) and the CareerCenter (uni-hohenheim.de/careercenter) are able to offer assistance. Prior to beginning your internship you also need to choose a supervisor related to the subject-area of your placement. The supervisor decides whether the internship placement is appropriate and also assesses the mandatory internship report. Please be aware that while internships may, of course, last longer than six or twelve weeks, respectively, no additional credit can be awarded. We nevertheless encourage you to complete a prolonged internship in order to gain experience.

There are two internship modules:

Slot	Module dates	Code	Module title
any	can be completed anytime	1500-500	Internship FSE (Industrial placement) (6 weeks, 7,5 ECTS)
any	can be completed anytime	1500-510	Internship FSE (Industrial placement) (12 weeks, 15 ECTS)

Language courses

The Language Center of the University of Hohenheim offers courses in more than ten languages, including German.

For more information on German language courses please visit www.spraz.uni-hohenheim.de/deutsch.

For more information on the Language Center and all other language courses please visit www.spraz.uni-hohenheim.de.

English language course – UNlcert III

UNlcert III – “English for Scientific Purposes” courses are available for all students of the Faculty of Natural Sciences. These courses are intended to aid students in improving their English skills and provide them with an internationally recognised language certificate.

This UNlcert III programme is designed to meet the specific needs of our students and can easily be integrated into the course of studies as an elective module, which also awards credits contributing towards your degree.

For further information please visit

www.natur.uni-hohenheim.de/languagecourse.

Examinations

Each module of the Master’s programme in Food Science and Engineering is completed with an examination. Modules counting towards the final grade are graded according to the German grading system, while modules that do not count towards the final grade are graded either according to the German grading system or marked with either “pass” or “fail.”

Types of examinations offered at the University of Hohenheim include written and oral examinations, protocols of practical courses, reports, preparation and presentation of contributions to seminars, as well as colloquia.

Examinations take place at the end of every module. You have to register for every exam online. The dates for module examinations are set by the party responsible for the respective module. Other assignments, such as protocols, reports, presentations, etc. are to be handed in during the lecture period.

Detailed information regarding requirements, type and duration of the examination, as well as the employed grading system may be found in the examination regulations of the English-language Master’s programmes of the Faculty of Natural Sciences.

Information on the respective valid examination regulations, deadlines, examination dates, etc. may be obtained at the examinations office or online at www.uni-hohenheim.de/exams.

Grading system

	German	English
1,0 1,3	<i>sehr gut</i>	very good
1,7 2,0 2,3	<i>gut</i>	good
2,7 3,0 3,3	<i>befriedigend</i>	satisfactory
3,7 4,0	<i>ausreichend</i>	sufficient
> 4,0	<i>nicht ausreichend</i>	fail

Recognition of credits obtained at another university

Credits obtained at another university during an exchange period can be recognised by the board of examiners and thus contribute towards your degree, as long as the awarding institution is equivalent to a German university and the competencies imparted by the courses taken do not exhibit substantial differences to the competencies of the programme in Food Science and Engineering as a whole.

Extending the period of study

Whilst the standard period of study is four semesters, the programme does not require you to complete your studies within that time. There are ways and reasons to naturally extend the period of study. **Please note that the maximum period of study is 7 semesters!**

Before modules are completed

If you have yet to complete your regular modules, excluding the Master's thesis, it is possible to take a semester on leave (*Urlaubssemester*). During this time you are free to spend a semester abroad and take courses and examinations at a host university. Completed modules can be accredited by the University of Hohenheim and thus contribute towards your degree. It is also possible to complete a prolonged internship, which may also be an extension of an internship done as part of an elective module; however, no extra credit is awarded.

A semester on leave provides you with the necessary flexibility to plan your studies on an individual basis. This need not necessarily extend the period of study as an exchange semester, for example, can be fully accredited. For further information on when a semester on leave can be granted please visit **www.uni-hohenheim.de/academicleaveofabsence**

After modules are completed

Once you have successfully completed your last module, with only the master's thesis left, you have six months before you are required to begin working on your thesis. However, please be aware that the maximum period of study is 7 semesters, which cannot be extended. You may, of course, opt to start writing your thesis right away. These six months provide you with the opportunity to do an internship or spend a semester abroad outside the constraints of the study programme. However, neither of these activities can be accredited, since all credits necessary have already been accumulated.

For further information on exchange semesters please visit the website of the Office of International Affairs at **exchange.uni-hohenheim.de**.

For further information on internships please visit the website of the Internship Office at **uhoh.de/praktikum**.

Career prospects

Your interdisciplinary expertise in the natural sciences and engineering, as well as your expert knowledge of complex food systems leads to many excellent job opportunities in various areas both nationally and internationally:

- food and nutritional research organisations, e.g. universities, national and international research institutions, FHO, etc.
- in the food and life science industry, pharmaceutical companies, the health care and biotechnology sector, the packaging industry, as well as their supplying industries
- leading positions in research and development, process and machine planning and construction, production and quality assurance
- advisory positions
- employment in marketing departments

With an above-average degree you also have the option of pursuing further academic qualifications by writing a doctoral dissertation at a university in German or abroad. This provides a path to leading positions in research and development or, if you are interested in economics, into management positions of international companies.

If you want to enter the job market outside academia, we would like to advise you to contact the CareerCenter for guidance. The CareerCenter Hohenheim is a service center and the first contact point for students and graduates for guidance when creating your own profile, as well as assistance with your career entry and career planning. For more information please visit www.uni-hohenheim.de/careerentry.

And finally...

You have successfully completed your studies and would like to use your degree certificate to apply for a job? No problem, but please keep the following in mind:

- Only after you have completed all exams and all of your grades have been entered into the system can your diploma be issued. Once all grades have been entered into the system you may exmatriculate yourself and do not need to re-register for the next semester. If you exmatriculate or forego re-registration before all grades have been entered into the system, your studies are considered to have ended prematurely with exams either not taken or not entered into the system.
- If you re-register due to missing entries in the system, you do not have to pay the semester fees.

Do you have further questions?

Should you have further questions regarding your course of studies, modules or the study programme in general, please send an email to your academic counsellors at **counselling-fse@uni-hohenheim.de**.

Important Dates
