

Key Satellite Measurements

(MSG, Metop IASI, AQUA AIRS, ...)

Franz H. Berger (DWD) and Dieter Klaes (Eumetsat)

Motivation

measurement of cloud & atmospheric properties during cloud evolution, especially of convective precipitating / non-precipitating clouds

→ complete cloud life cycle

various 4D – fields are needed: PTU, wind, geometrical (top, base, multi-layered), optical (thickness), microphysical (radius, LWC/IWC, phase) cloud properties, aerosols (type, radius), radiation (insolation, DLR, OLR, ...), surface properties (reflectance, LST/SST)

Use of satellite - remotely sensed data:

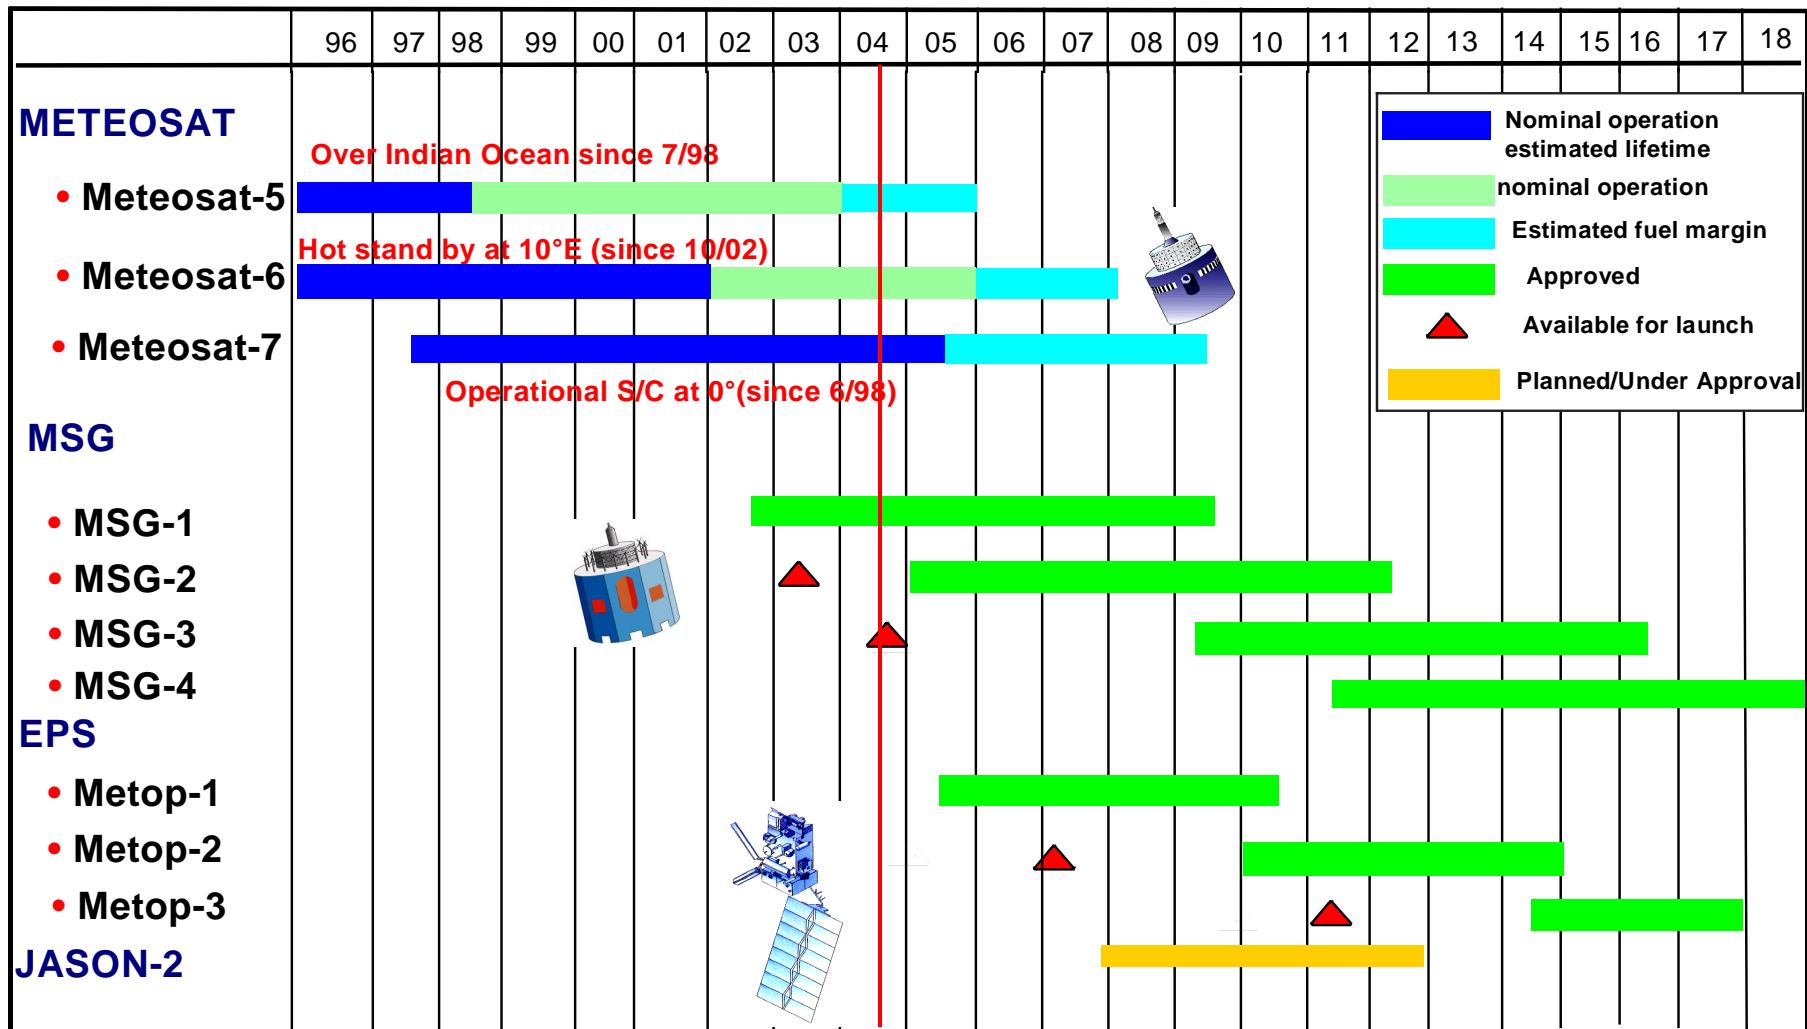

1. independent determination of atmos. properties (incl. synergy of sensors at separate / same platform and with surface based remotely sensed data)
2. validation of numerical models
3. initialisation of numerical models
4. assimilation of remotely sensed data into numerical models (nudging, 1D/3D/4DVAR)

Which satellite data are available during COPS?

- **geostationary satellites** (Meteosat Rapid Scan, Meteosat Second Generation)
- **polar-orbiting satellites** (Envisat, A-Train, Metop, ...)

- only some examples -
not a complete discussion of current and future
satellite sensors

EUMETSAT SATELLITE PROGRAMMES

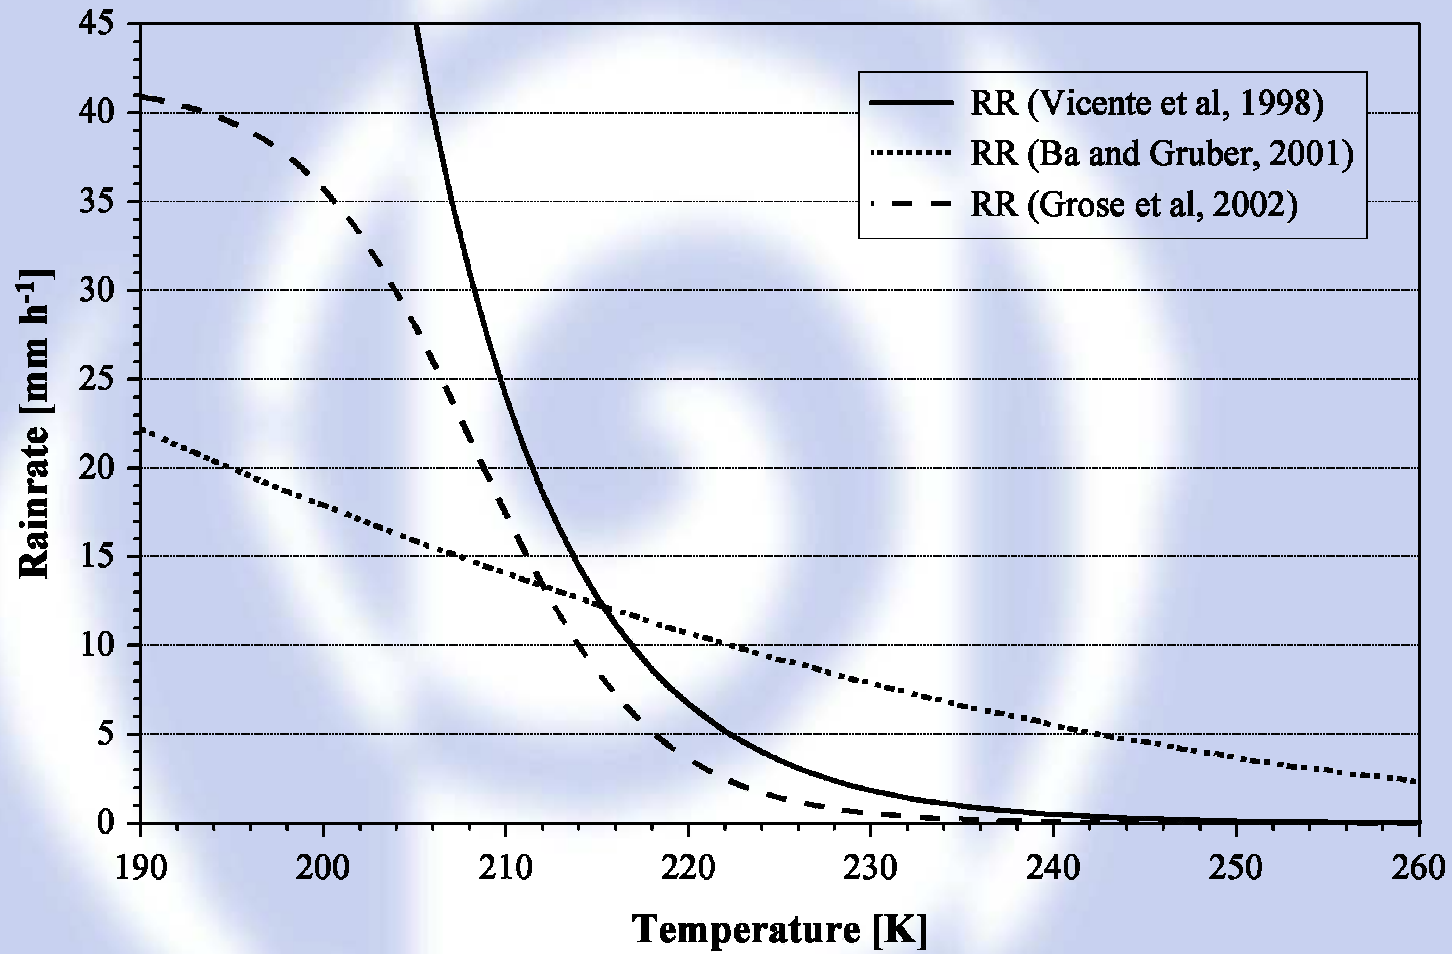

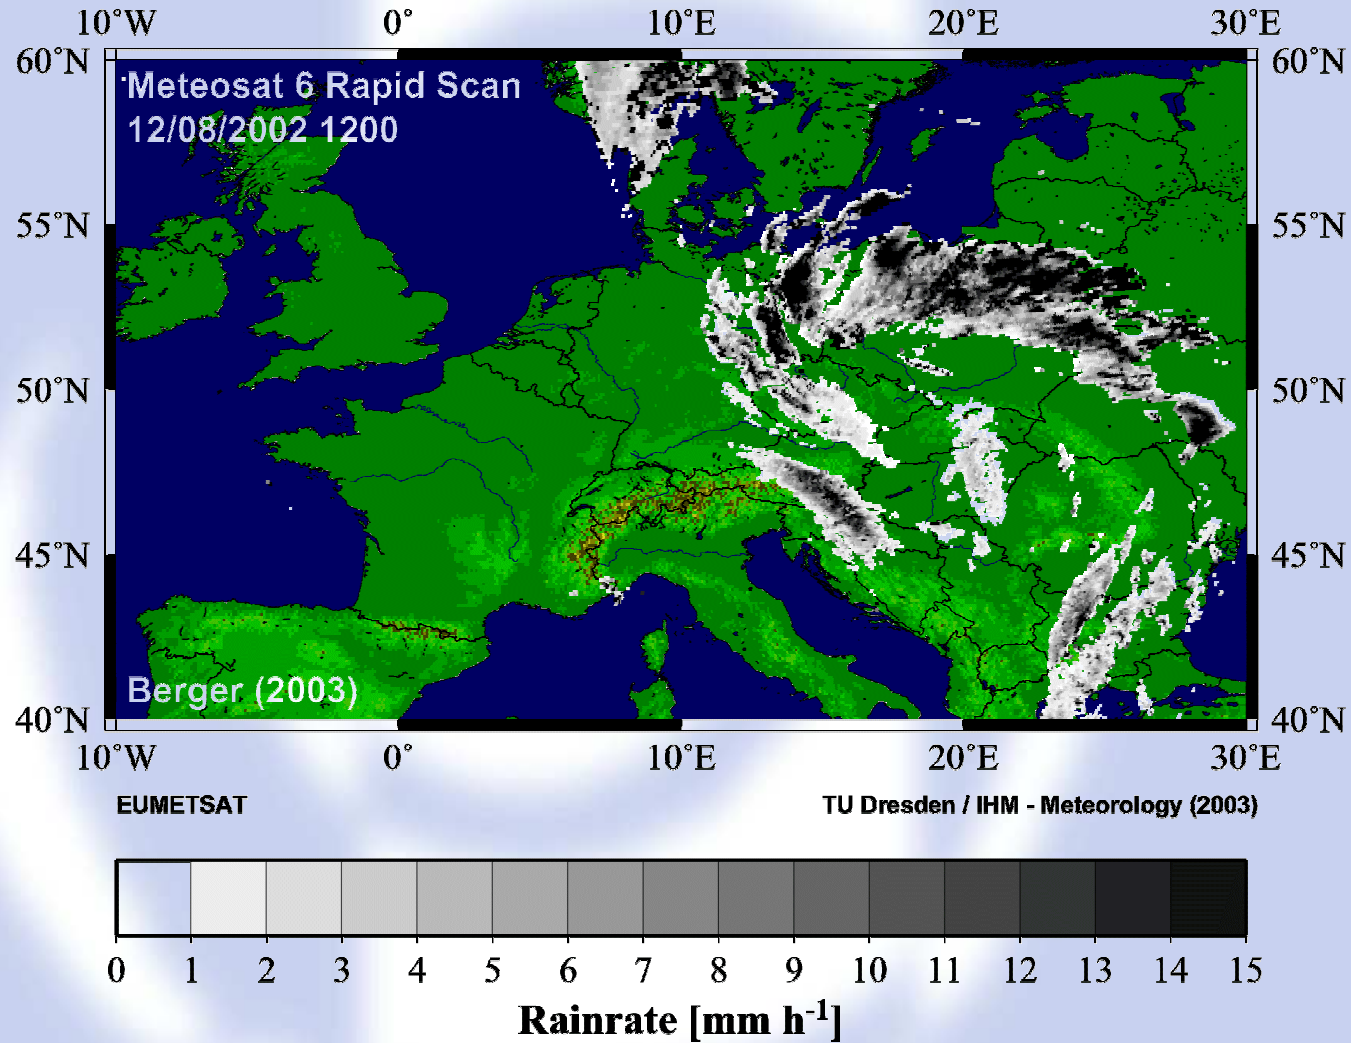

Meteosat Rapid Scan:

- spectral resolution: 3 channels (VIS, WV, IR)
- temporal resolution: 10 minutes
- spatial resolution: 2.5/5 km (nadir)

Rain rate estimates:

- 1. IR methods:** Vicente et al (1998), Ba and Gruber (2001), Grose et al (2002)
- 2. IR/WV methods:** Kurino (1997)
- 3. IR/WV/numerical model:** Reudenbach et al (2001)
- 4. IR/WV/cloud life cycle method:** Berger, 2003
- 5. Eumetsat Multi-sensor Precipitation Estimate (MPE):** Heinemann et al, 2003

Meteosat-8 (MSG) SEVIRI / GERB

- spectral resolution: 12 channels / 2 channels
- temporal resolution: 15 minutes
- spatial resolution: 3 km (nadir), 1 km (HRV)
45x40 km² (GERB)

Meteosat-8 (MSG-1) normal mode

Meteosat-9 (MSG-2) rapid scan mode

MSG capabilities

VIS 0.6 μm

VIS 0.8 μm

NIR 1.6 μm

NIR 3.9 μm

WV 6.2 μm

WV 7.3 μm

IR 8.7 μm

IR 9.7 μm

IR 10.8 μm

IR 12.0 μm

IR 13.4 μm

HRVIS

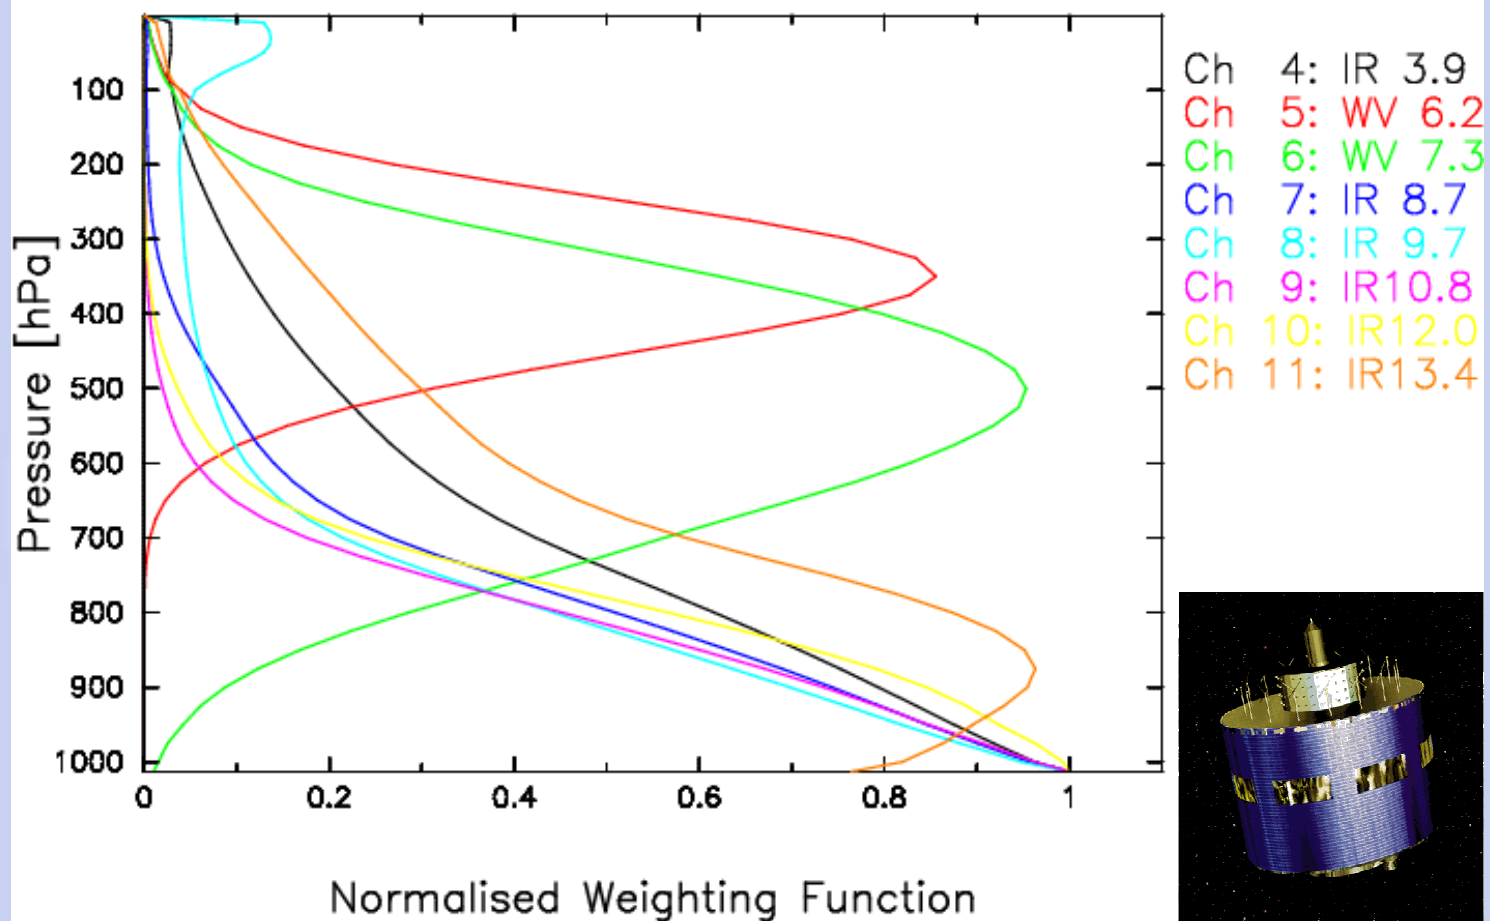

TABLE I. Spectral channel characteristics of SEVIRI providing central, minimum, and maximum wavelength of the channels and whether the channel is an absorption or a window channel. A concise summary of the use of the spectral channels is given in the section titled “SEVERI spectral channels.”

Channel no.		Characteristics of spectral band (μm)			Main gaseous absorber or window
		λ_{cen}	λ_{min}	λ_{max}	
1	VIS0.6	0.635	0.56	0.71	Window
2	VIS0.8	0.81	0.74	0.88	Window
3	NIR1.6	1.64	1.50	1.78	Window
4	IR3.9	3.90	3.48	4.36	Window
5	WV6.2	6.25	5.35	7.15	Water vapor
6	WV7.3	7.35	6.85	7.85	Water vapor
7	IR8.7	8.70	8.30	9.10	Window
8	IR9.7	9.66	9.38	9.94	Ozone
9	IR10.8	10.80	9.80	11.80	Window
10	IR12.0	12.00	11.00	13.00	Window
11	IR13.4	13.40	12.40	14.40	Carbon dioxide
12	HRV	Broadband (about 0.4 – 1.1)			Window/water vapor

**Schmetz et al
BAMS 2002**

Standard Mid-Latitude Summer Nadir

- **VIS0.6 & VIS0.8:** cloud detection, aerosol, landsurface and vegetation monitoring
- **NIR1.6:** snow / cloud discrimination, ice / water cloud discrimination, cloud effective droplet radius / crystal diameter
- **IR3.9:** cloud / fog discrimination, fires
- **WV6.3 & WV7.3:** WV-observation, atmospheric motion winds
- **IR8.7:** additional information about ice clouds and ice / water cloud discrimination
- **IR9.7:** ozone-monitoring (total ozone)
- **IR10.8 & IR12.0:** landsurface temperature/emissivity
- **IR13.4:** temperature of lower troposphere

Recommended Differences

NIR1.6 - VIS0.6	optical thickness, phase, particle size
IR3.9 - IR10.8	optical thickness, phase, particle size, emissivity
IR8.7 - IR10.8	optical thickness
IR12.0 - IR10.8	optical thickness
WV6.2 - IR10.8	overshooting tops
WV6.2 - WV7.3	overshooting tops

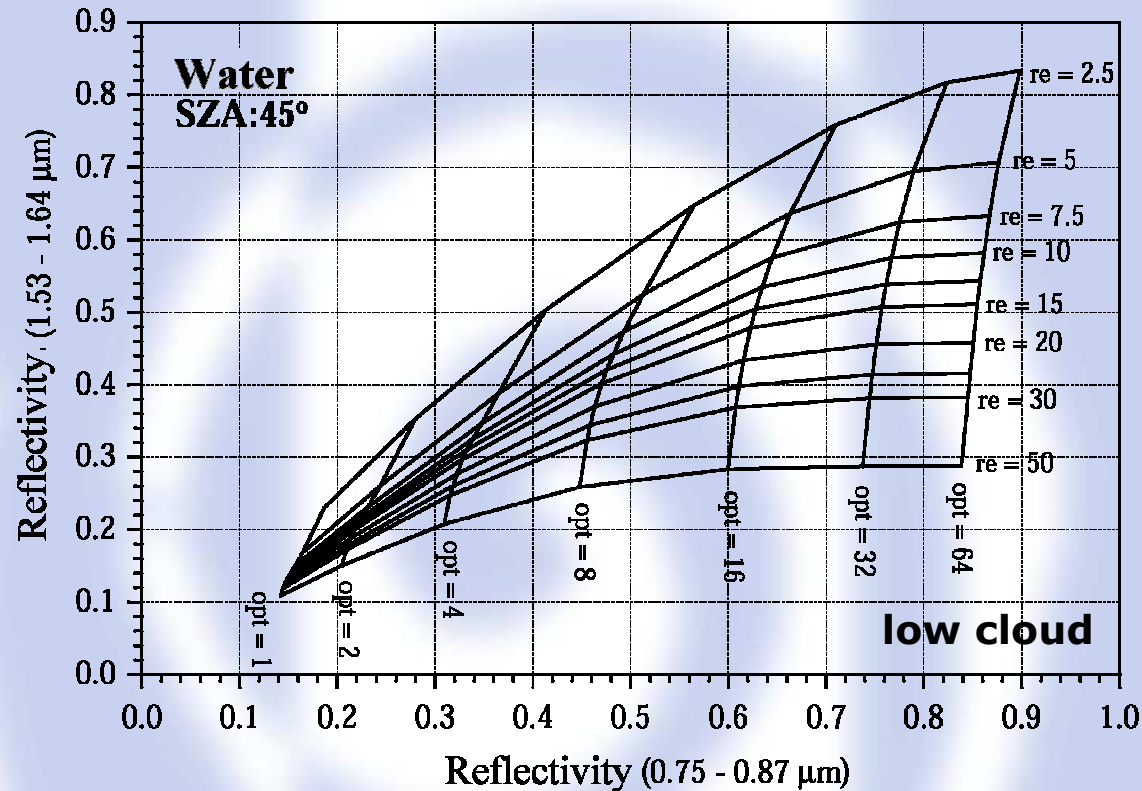

Channel 12 (HRV)

RGB HRV-HRV-IR10.8

MSG-1, 5 June 2003, 14:45 UTC

Rosenfeld (2003)

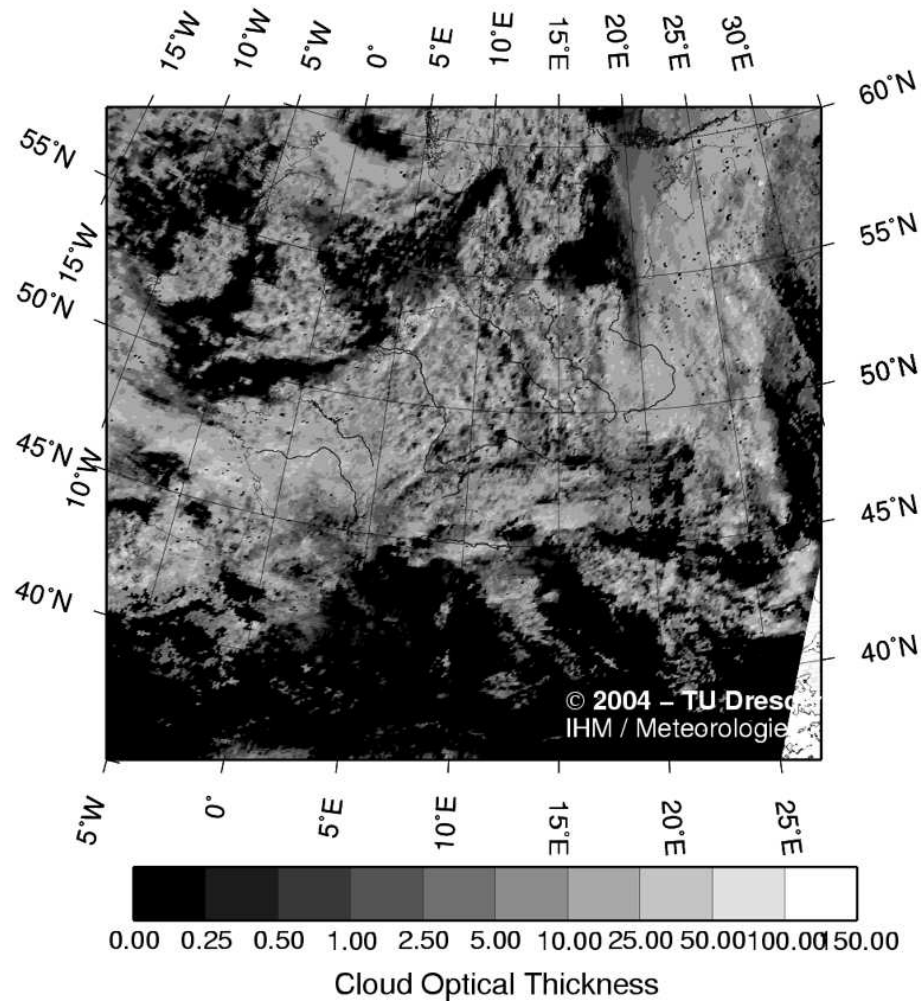

(after Nakajima et al, 1990; Halecker, 2000)

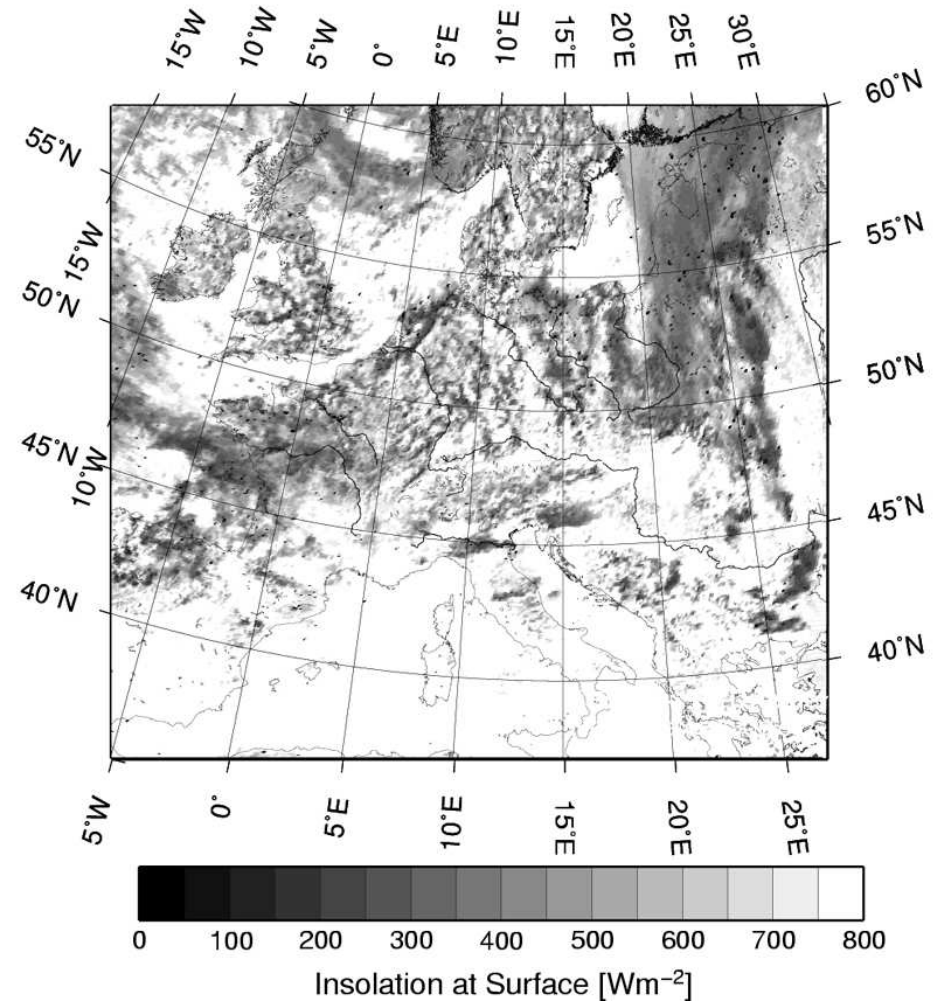

r_e at cloud top indicating updrafts!

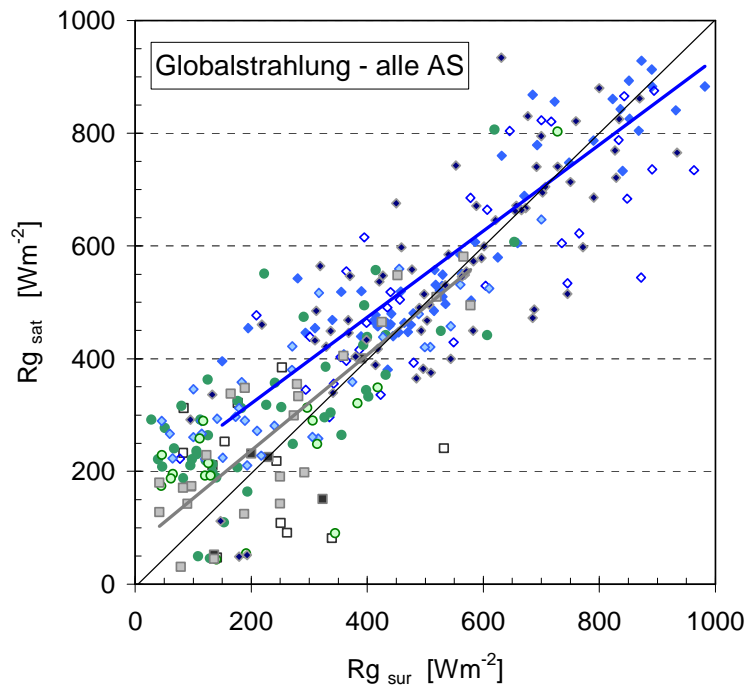

→ Liquid / Ice Water Path: $LWP \cong \frac{2}{3} \frac{r_e \delta_c}{\rho_l}$ $IWP \cong \frac{D_e \delta_c}{3.68}$

Meteosat-8 SEVIRI – 21/06/04 12:30 UTC

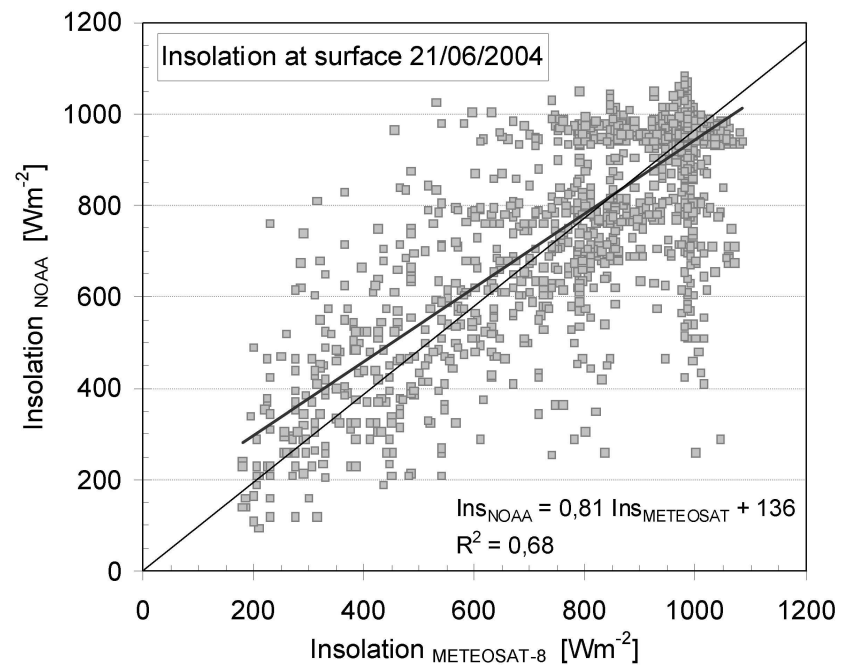

Meteosat-8 SEVIRI – 21/06/04 12:30 UTC

- ◆ wolkenlos (3,4)
- tief+dick (5)
- ◇ tief+dünn (6,7)
- mehrfach geschichtet I (8,9)
- mittelhoch+dick (10)
- ◇ mittelhoch+dünn (11)
- mehrfach geschichtet II (12,13)
- ◆ hoch+dünn (14-16)
- hoch+dick (17,18,24)

MPEF products

Cloud cover (CLA)

Cloud top height (CTH)

Clear sky radiances (CSR)

Tropospheric humidity (UTH, MTH)

Atmospheric motion winds (AMV)

ISCCP products (IDS)

High-resolution precipitation index (HPI)

Global instability index (GII)

Total Ozone – experimental

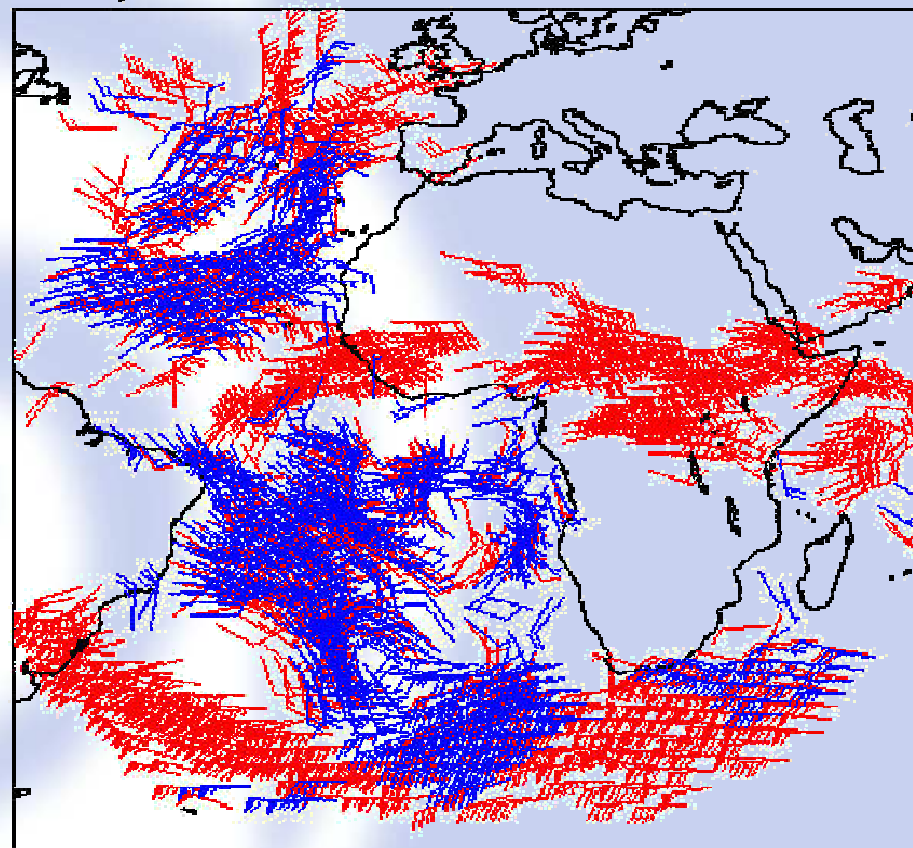

and a large variety of **SAFs products**

a) Old operational IR data

b) Reprocessed ELW data, IR and VIS

Typical AMV coverage after ECMWF blacklisting (12z +/- 3h)

Jörgen Gustafsson, Leo van de Berg, Fausto Roveda, Ahmet Yilderim (Eumetsat)
Niels Bormann, Sakari Uppala (ECMWF)

The A-TRAIN

AQUA

CLOUDSAT

CALIPSO

PARASOL

AURA

MODIS-Moderate Resolution Imaging Spectroradiometer

CERES- Clouds and the Earth's Radiant Energy System

AMSRE- Advanced Microwave Scanning Radiometer

AMSU-Advanced Microwave Sounding Unit

AIRS- Atmospheric Infrared Sounder

HSB- Humidity Sounder for Brazil

AQUA Instrument Specifications: Temperature and Moisture Sounding Suite

AMSU
(Temperature and moisture profiles)
15 discrete channels in the range of 50 to 89 GHz

AMSR/E (Cloud properties, precipitation, total moisture) 12 channels at six discrete frequencies in the range of 6.9 to 89 GHz

AIRS (Temperature & moisture profiles, cloud properties)
2,300 spectral channels in the range of 0.4 to 1.7 μm and 3.4 to 15.4 μm

HSB (Moisture profiles)
5 discrete channels in the range of 150 to 183 MHz

CLOUDSAT

Launch planned 2005

Measurements:

**profiles of cloud liquid water
and ice water content**

Properties

**94 GHz Cloud Profiling Radar
(CPR); Nadir-viewing; 500 m
vertical resolution; 1.2 km
cross-track resolution, 3.5 km
along track**

CALIPSO Instrument Specifications: Lidar

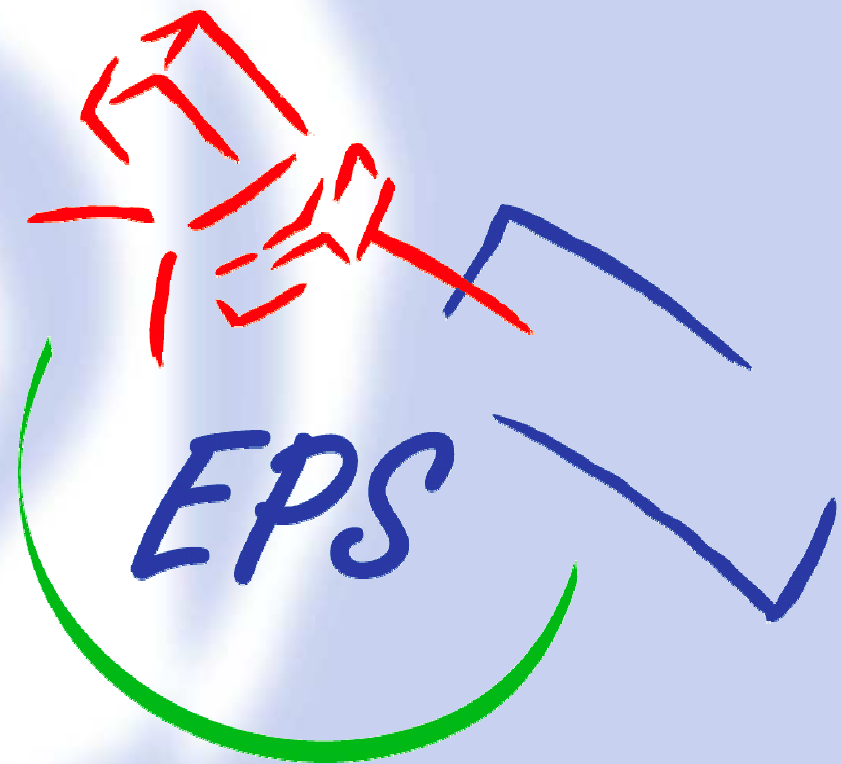

Lidar

Measurements:
Backscattered radiances

Properties:
2-wavelength 532 nm and 1064 nm, polarization sensitive at 532nm; Horizontal/vertical resolution: 333 m/ 30 m (resolution will be decreased for getting good S/N ratio)

EUMETSAT POLAR SYSTEM

- Scheduled launch Oct 2005
- 14 years of operation
