

## Phosphorus & Minerals in Animal Production

Advances in Nutrition, Genetics, Physiology and Microbiome

7<sup>th</sup> - 8<sup>th</sup> July 2020 University of Hohenheim, Stuttgart

The unique feature of the Phosphorus & Minerals in Animal Production (PMAP) conference is the combination and linking of different research areas regarding nutrition, genetics, physiology and microbiome of national and international research groups.

Our conference will deal with the major challenges arising from the fact that the global phosphorus reserves are finite. For us as animal producers, researchers and even end consumers, it is becoming increasingly important to rethink existing processes and find ways to use phosphorus efficiently and sustainably in animal production.

So come by, listen to lectures, join in discussion and be a part of this existing future.

### An affordable price

15€ incl. conference dinner

### Confirmed speakers for key-notes

Nutrition: Dr. Pirgozliev

Physiology: Prof. Dr. Zebeli

Microbiome: Dr. Metzler-Zebeli

### Organizers

P-FOWL research unit

### Registration and abstract submission

Opens on 15<sup>th</sup> January 2020
